

Section 3-2 Sinusoidal Graphs

$$y = C + A \cos B(\theta - D) \quad \text{or} \quad y = C + A \sin B(\theta - D)$$

- C is the location of the sinusoidal axis (vertical translation up or down)
- |A| is the amplitude (or vertical dilation, which can be positive or negative if graph upside down)
- B is how you find the period ($360^\circ / B$)
- D is the phase displacement (horizontal translation left or right)

Graph.

1. $y = 4 + 3 \cos 2(\theta - 70^\circ)$

vt sinusoidal axis: $y = 4$

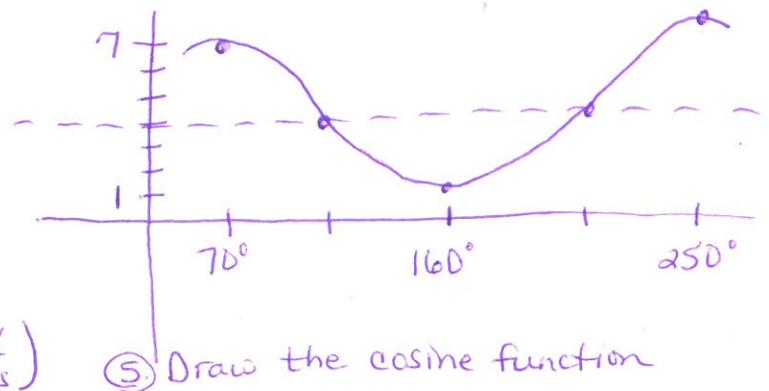

vd amplitude: 3

hd period: 180° $360^\circ * hd = \text{period}$; $360^\circ * \frac{1}{2} = \text{period}$; $180^\circ = \text{period}$

ht phase displacement: 70°

Graph in this order:

- ① sinusoidal axis (dashed)
- ② amplitude (mark on y-axis)
- ③ phase disp. (mark on x-axis)
- ④ period (add to phase disp. mark x-axis)

⑤ Draw the cosine function

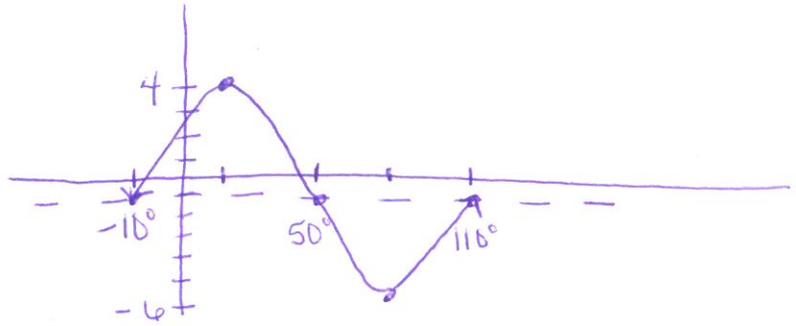

2. $y = -1 + 5\sin 3(\theta + 10^\circ)$

vt sinusoidal axis: -1

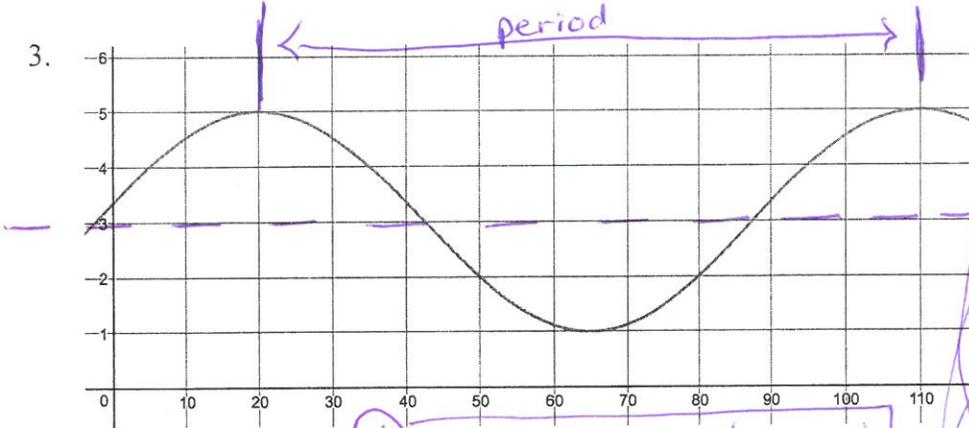

vd amplitude: 5

hd period: 120° $360^\circ \times hd = \text{period}$; $360^\circ \times \frac{1}{3} = \text{period}$ $120^\circ = \text{period}$

ht phase displacement: -10°

Write an equation for the sinusoid using cosine or sine, whichever seems easier.

① Steps:

- ① find sin. axis (vt)
- ② find amp (vd)
- ③ find beg of sine or cosine function (ht)
- ④ find the period & use it to find hd

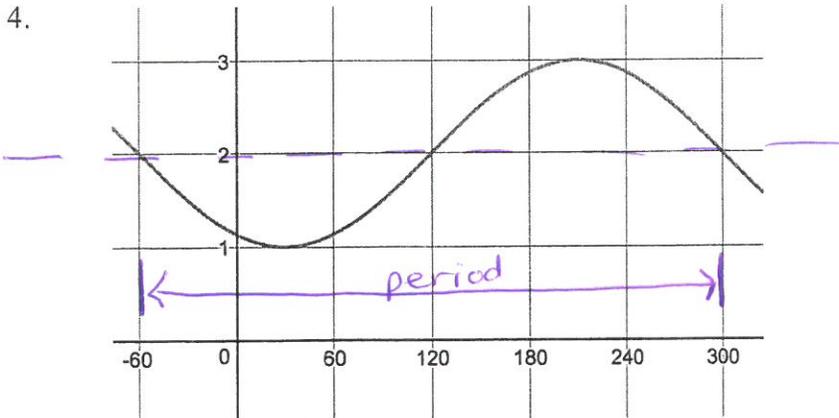

How to: ②

- ① $\frac{1}{2}$ b/w max & min
- ② distance from sinusoidal axis to top (max) or bottom (min)
- ③ start @ sin. axis for sine @ max for cosine
- ④ go from high pt to high pt

③

- ① sin. axis $\rightarrow y = 3$
- ② amp $\rightarrow 2$
- ③ phase disp $\rightarrow 20^\circ$ right (for cosine)
- ④ period $\rightarrow 90^\circ \rightarrow 360^\circ \times hd = 90^\circ$; $hd = \frac{1}{4}$

4.

$y = 2 + 1 \sin 1(\theta - 120^\circ)$
OR
 $y = 2 + \sin(\theta - 120^\circ)$

- ① sin axis $\rightarrow y = 2$
- ② amp $\rightarrow 1$
- ③ phase disp. $\rightarrow 120^\circ$ (for sine)
- ④ period $\rightarrow 360^\circ \rightarrow 360^\circ \times hd = 360^\circ$; $hd = 1$
