

Section 12-2 Hyperbola

Def: the set of all points such that the absolute value of the *difference* of the distances from the foci is constant

Unit Hyperbola

$$x^2 - y^2 = 1$$

- opens in the x-direction (left and right)
- because x^2 is positive
- x radius = 1 and y radius = 1 center (0, 0)
- asymptotes at $y = \pm x$ from center
- vertices left 1 and right 1 from center

$$-x^2 + y^2 = 1$$

- opens in the y-direction (up and down)
- because y^2 is positive
- x radius = 1 and y radius = 1 center (0, 0)
- asymptotes at $y = \pm x$ from center
- vertices up 1 and down 1 from center

$$\left(\frac{x-1}{4}\right)^2 - \left(\frac{y+3}{2}\right)^2 = 1$$

- opens *x* direction
- center (1, -3)
- asymptotes $\pm \frac{2}{4}$ or $\frac{1}{2}$
- vertices (-3, -3) and (5, -3)

$$-\left(\frac{x+5}{2}\right)^2 + \left(\frac{y-4}{3}\right)^2 = 1$$

- opens *y* direction
- center (-5, 4)
- asymptotes $\pm \frac{3}{2}$
- vertices (-5, 1) and (-5, 7)

Standard Equation

$$\left(\frac{x-h}{a}\right)^2 - \left(\frac{y-k}{b}\right)^2 = 1$$

center (h, k) opens left/right

asymptotes $y = \pm \frac{b}{a}x$

transverse radius a (horizontal)

conjugate radius b

(axis where vertices are)
(other axis)

$$-\left(\frac{x-h}{b}\right)^2 + \left(\frac{y-k}{a}\right)^2 = 1$$

center (h, k) opens up/down

asymptotes $y = \pm \frac{a}{b}x$

transverse radius a (vertical)
conjugate radius b

Foci (c) will be on concave side (inside the bowl)

$$c^2 = a^2 + b^2$$

**note $e > 1$
